PaperCut MF Now Supports Toshiba's e-STUDIO1207 Series

We are pleased to announce the release of PaperCut MF V15.2 (Build 33705) with support for the e-STUDIO1207 series. PaperCut MF print management software interfaces directly with Toshiba's e-STUDIO1207 series to track off-the-glass functions such as copy, scan, fax and secure print release.

PaperCut MF for our e-STUDIO1207 series provides customers with best in class Output Management Solutions for the light production environment. PaperCut MF enables users to release print jobs at any available MFP on the network. This "onboard" solution provides an intuitive user experience while eliminating the need for costly print job release stations.

PaperCut MF also enables single-sign-on Active Directory authentication to both the MFP and PaperCut via the front panel or one of the many supported card readers designed to utilize employee/student ID or building access cards that might already be in place.

Businesses with environmental or cost-savings initiatives will embrace the rules-based printing feature that lets them create output policies with varying levels of enforcement to guide users in best practices. Desktop Widgets show users their own individual impact, while administrators can instantly view one of fifty standard usage reports or easily create unique ones.

Key Features of PaperCut MF –

- Onboard Design – provides access to the PaperCut server directly from the front panel of the e-STUDIO1207 series
- "Find Me" Printing – enables users to release their print jobs at any available MFP or printer on the network
- Active Directory Single-Sign-on – conveniently authenticate just once to use PaperCut and the MFP via the front panel or card reader directly on the device
- Rules-based Printing – lets businesses create output policies with varying levels of enforcement to guide users in best practices.

TOSHIBA

Leading Innovation >>>

- Tracking & Monitoring – total copy, print, fax and scan usage of individual users across entire fleet for billing or chargeback
- Detailed Reporting – enables thorough analysis of fleet usage
- Shared Accounts – track usage of departments, clients or matter codes for billing purposes
